Given a text file containing a list of grocery products which includes the product name, a price, and the number of units, display to standard output products whose quantity is greater than or equal to 50 units sorted by price from high to low.

An example of the contents of a the inventory list:

```
PRODUCT           PRICE        QUANTITY

Apple             0.75         125
Orange            0.80         218
Pear              0.99         116
Pineapple         1.75         45
Watermelon        1.15         20
```

And the resulting output of this list would be:

```
PRODUCT           PRICE        QUANTITY
Pear              0.99         116
Orange            0.8          218
Apple             0.75         125
```
